SECURITY ADVISORY

As typical for simulation software, some input files for this software may result in massive CPU, memory, or disk usage, or in application crashes, or, in rare cases, even system crashes, which potentially may affect the availability or security of your system. For this reason, additional care should be employed when executing input files from unknown third persons. In particular, executing input files containing seemingly garbled content or also accepting and executing input files via an automated network interface may involve security risks. If in doubt, please consult with your IT department or your system administrator concerning risk mitigation.

The nextnano software uses some parts (source code or libraries) which have been developed by other parties, e.g. BLAS, LAPACK, ARPACK.

In the following, we print the relevant licenses.

BLAS Basic-Linear Algebra Package <http://www.netlib.org/blas>

BLAS is a freely-available software package.

Thus, it can be included in commercial software packages (and has been).
